

In the past months I have been hearing that have Net Neutrality be under Title II has been a bad think. Work for a City that is see no reduction in small start-ups in ISP which some of the innovation we is in the industry comes from. Title II just help these start-up it a fair shot to succeed or fail. I look for any information you can sent me that shows the that Title II hinders innovation. Thank you of your service and look forward to any information you have.
